

PROPERTY DEVELOPMENT PLATFORM

LandQ

The AI-Powered Property Development Operating System

Automate land feasibility analysis. Reduce due diligence costs by 80%. From weeks to minutes.

OUR VISION

Transforming how Australia's property developers evaluate land

In an industry where a single land acquisition can represent a \$10–\$100 million decision, the due diligence process remains stubbornly manual. Developers spend weeks gathering fragmented data from dozens of government portals, consultants, and databases — only to abandon 70–80% of sites they investigate.

LandQ was built to change this. By connecting directly to government open data APIs and leveraging AI, we compress the entire desktop feasibility process from weeks to minutes — giving developers the confidence to move faster and the intelligence to move smarter.

“Every week of delay is a week a competitor can move first. Speed is the new competitive advantage in land acquisition.”

\$100K+

WASTED PER ABANDONED SITE

2–4 wks

TRADITIONAL DD TIMELINE

70–80%

SITES ABANDONED AFTER DD

THE PROBLEM

The land acquisition process is broken

Australian property developers face a costly, time-consuming due diligence process that hasn't fundamentally changed in decades.

01

Fragmented Data

Planning data scattered across council portals, GIS systems, government databases, PDF reports, and Excel spreadsheets. Each site requires searching 20+ different sources.

02

Manual Reports

Feasibility reports still compiled by hand in Word and Excel. A single report takes 2–4 weeks and costs \$20K–\$60K in consultant fees.

03

High Sunk Costs

Developers spend \$100K+ investigating each site. With 70–80% of sites abandoned, hundreds of thousands are wasted annually on dead-end acquisitions.

04

No Unified Platform

Land opportunities, consultant reports, emails, and decisions managed across disconnected tools — email, shared drives, personal folders.

“We were spending more time gathering data than analysing it.” — Land Acquisition Manager, Sydney-based developer

THE SOLUTION

One platform. Address in, feasibility out.

LandQ connects directly to government open data APIs to deliver comprehensive planning intelligence for any site in Australia — instantly, automatically, and at a fraction of traditional cost.

1

Enter an Address

Type any Australian property address or lot number into the platform.

2

AI Queries 30+ Sources

Real-time data from NSW ePlanning, VIC OpenData, G-NAF, and more — in under 300ms.

3

Get Your Report

AI-generated feasibility report with zoning, risk analysis, yield estimation, and recommendations.

NSW EPLANNING

VIC OPENDATA

30+ APIS

PLATFORM FEATURES

A complete operating system for property development

AI Feasibility Reports

Institutional-grade reports generated in minutes. Site overview, planning analysis, development potential, risk assessment, and recommendations — all automated.

Document Management

Centralised hub for all project documents. Version control, AI auto-tagging, full-text search, and team sharing.

Chrome Extension

Browse REA, Domain, or Landchecker — get instant planning data overlay without leaving the page.

Email Hub

Connect multiple email accounts. AI auto-links emails to land sites and categorises by project.

Land CRM Pipeline

Manage every opportunity from Lead through Research, Feasibility, Negotiation to Acquired.

Project Management

Post-acquisition tracking: timelines, stages, contractors, consultants, approvals, and milestones.

DATA ENGINE

Real-time government data. Zero manual research.

LandQ queries NSW ePlanning ArcGIS REST and VIC OpenData WFS endpoints in parallel — delivering comprehensive planning controls for any parcel in under 300 milliseconds. All endpoints are free, open, and require no API key.

DATA TYPE	NSW	VIC	SPEED
Zoning	✓	✓	137ms
FSR / Density	✓	—	138ms
Height Limits	✓	✓	142ms
Bushfire Risk	✓	✓	150ms
Flood Risk	✓	✓	157ms
Heritage	✓	✓	133ms
Cadastre / Lot	✓	✓	203ms
Easements	✓	—	210ms

● All endpoints verified and tested. Free, open access — no API key required. Expanding to QLD, SA, WA in 2026.

RETURN ON INVESTMENT

Reduce due diligence costs by 80%

\$100K+

TRADITIONAL DD COST PER SITE

~80%

COST REDUCTION WITH LANDQ

<1 hr

VS 2-4 WEEKS TRADITIONAL

ITEM	TRADITIONAL	LANDQ	SAVED
Desktop Planning Research	\$3K - \$8K	Automated	100%
Town Planner (Initial)	\$5K - \$15K	AI-Generated	80%
Constraint Screening	\$2K - \$5K	Automated	100%
Yield & Feasibility Model	\$5K - \$20K	AI-Calculated	70%
Document Management	\$5K - \$10K	Built-in	100%
Comparable Sales Research	\$2K - \$5K	API-Integrated	90%
Total Phase 1 Screening	\$22K - \$63K	~\$5K	~80%

Example: A developer evaluating 10 sites/year, abandoning 7 = **\$700K+ wasted** in traditional DD. With LandQ, the same screening costs under **\$50K**.
